

BestFit

Thrift-fashion commerce powered by fit intelligence. BestFit helps shoppers discover secondhand clothes that are likely to fit, while turning fragmented garment and body measurements into reusable infrastructure.

KENYA LAUNCH WEDGE

MARKETPLACE + DATA PLATFORM

CIRCULAR FASHION

CORE THESIS

Online thrifting breaks when inventory is unique, sizing is inconsistent, and fit confidence is low. BestFit solves all three by pairing resale liquidity with a measurement system built for apparel.

FROM DAY ZERO

Built as a venture-scale wedge: start with a thrift marketplace, grow into a cross-brand fit data layer.

THE PROBLEM

Sizing guesswork breaks online thrift and leaves value stranded on both sides of the market.

Secondhand apparel is especially hard to buy online because every item is one-off, labels are unreliable, and shoppers cannot trust whether a garment will actually fit.

01

Supply is fragmented

Thrift sellers manage unique inventory with inconsistent size labels, weak metadata, and limited ability to match items to the right buyer.

02

Buyers lack fit confidence

Online shoppers cannot try items on, and brand size charts do not translate cleanly to secondhand inventory or to non-standard body types.

03

Waste compounds the pain

Bad fit reduces conversion, slows inventory turnover, increases returns, and pushes more apparel toward low-value clearance or disposal.

The missing layer is structured fit data.

BestFit treats measurement as a first-class domain, so body dimensions, garment dimensions, fit style, and tolerance rules can be compared consistently.

Why Kenya first

Thrifting is already mainstream, fashion discovery is increasingly digital, and fit uncertainty is one of the biggest blockers to scaling online resale.

WHY NOW

Resale is growing globally, Kenya already has real secondhand volume, and discovery is becoming data-driven.

GLOBAL TAILWIND

\$367B

Global secondhand apparel market projected for 2029. Resale is no longer niche. It is becoming a major retail category.

KENYA VOLUME

\$187M

Kenya's 2023 imports of worn clothing and other worn articles. The country already sits on meaningful secondhand apparel flow.

PHYSICAL THROUGHPUT

197.8M kg

2023 Kenya import quantity for used clothing under HS 630900. Even modest improvements in fit matching can unlock large efficiency gains.

DISCOVERY SHIFT

48%

Consumers saying better personalization and discovery can make secondhand as easy as new. Fit-aware ranking can be a growth lever, not just a utility feature.

THE SOLUTION

BestFit combines a thrift marketplace with a reusable fit intelligence layer.

The marketplace wedge creates liquidity and proprietary data. The measurement engine becomes the long-term platform.

1

Buyer profile

Create a structured body profile instead of relying on guessed sizes.
Measurements grouped by body region and unit system.

2

Seller capture

Upload garment photos plus actual dimensions for the specific item.
Especially valuable for one-off thrift inventory.

3

Normalization

Map both sides into consistent measurement entities and garment categories.
Eliminates brand-by-brand ambiguity.

4

Fit scoring

Rank items using fit style, garment relevance, and tolerance rules.
Accounts for elasticity and intended fit.

5

Higher confidence

Surface likely-fit items first, improving conversion and reducing waste.
Marketplace benefit now, API opportunity later.

Marketplace wedge

Acquire supply and demand through secondhand commerce where fit pain is highest.

Platform outcome

Turn accumulated fit data into seller tooling, recommendations, and a reusable API layer.

EXECUTION PROOF

BestFit is already more than a concept.

The repo reflects an active product build spanning domain modeling, API endpoints, web storefronts, and a .NET MAUI Blazor Hybrid client.

Domain-driven model

Structured customer and product measurement profiles.

Multi-surface stack

ASP.NET Core API, web experience, and MAUI hybrid app.

Fit-aware inputs

Elasticity, fit style, and garment-specific dimensions.

Quality discipline

Unit, integration, and acceptance tests are already in repo.

FitStyle

WHY BESTFIT WINS

The moat is not just inventory. It is the measurement system behind the transaction.

BestFit can evolve from a local marketplace into a fit infrastructure company because the core model is extensible across brands, garment types, and downstream applications.

Human body dimension model

- Standard measurement definitions
- How each measurement is taken
- Anatomical references and unit handling
- Inclusive treatment of body variation

Fit context layer

- Measurement relevance by garment type
- Fit style logic: slim, regular, oversized
- Fabric elasticity and tolerance rules
- Potential to learn from outcomes over time

Integration layer

- Marketplace ranking and recommendations
- Seller measurement tooling
- Cross-brand fit APIs
- Tailoring, scanning, and research partnerships

WHAT OTHERS DO

Most resale platforms optimize listing and logistics. Most sizing tools sit on top of brand size charts. Few treat measurement data as the product.

BESTFIT ADVANTAGE

Capture the transaction and the fit layer together, so every matched purchase improves the measurement graph and strengthens the recommendation engine.

Start with Nairobi thrift supply, build a trusted fit experience, then expand into seller and platform tooling.

PHASE 1

Supply-side wedge

- Boutique mitumba curators
- Instagram and WhatsApp thrift sellers
- Campus and community resellers

PHASE 2

Demand-side focus

- Urban mobile shoppers who already buy secondhand
- Style-conscious buyers seeking convenience
- Underserved body types who need better fit confidence

PHASE 3

Platform expansion

- Seller subscriptions and analytics
- B2B fit API for other commerce surfaces
- Future tailoring and scanning integrations

More measurement-tagged inventory

Better fit ranking and buyer confidence

Higher conversion and lower waste

More seller adoption and richer data

Monetize first as commerce, then as infrastructure.

The marketplace creates early revenue and proprietary data. The software and fit layer create higher-margin expansion paths.

Marketplace take rate

Commission on completed secondhand transactions.

Seller tools

Paid measurement capture, storefront tools, analytics, and boosted placement.

Fit API / SDK

Subscription pricing for third-party retailers, resale apps, or fit engines.

Premium services

Optional assisted measurement capture, tailoring partners, or enterprise data services.

Short-term business

Use a transaction-led model to prove demand, reduce friction, and build the dataset.

Long-term upside

Become the reusable fit layer for circular fashion and measurement-aware commerce.

Build credibility with a focused MVP, then scale from Kenyan resale into fit infrastructure.

NOW - 2026

Foundation

- + Canonical measurement dataset and definitions
- + Schema validation across body and garment entities
- + Profile and listing workflows for fit-aware commerce
- + Continue strengthening API, web, and app surfaces

NEXT 6-12 MONTHS

MVP + pilot

- + Pilot with a focused seller cohort in Nairobi
- + Launch likely-fit ranking and conversion learning loops
- + Measure confidence, repeat purchase behavior, and returns impact
- + Refine the narrowest repeatable GTM wedge

12-24 MONTHS

Expand the platform

- + Expose fit intelligence through seller tooling and APIs
- + Add cross-brand interoperability features
- + Explore tailoring, scanning, and partner integrations
- + Scale beyond Kenya into broader circular fashion flows

WHY ANTLER

BestFit is built for the kind of day-zero support Antler is known for.

Start with a painful, fragmented market. Build a venture-scale wedge. Use early product execution to validate a platform that can expand far beyond a single storefront.

BestFit is currently in active design and research, with real architecture already in place. The next goal is sharper validation: the right wedge, the right early customers, and the right speed toward product-market fit. Replace this footer with your name, email, and phone number if you plan to send the deck as a standalone attachment outside Antler's application form.

WHY THIS CAN BE VENTURE-SCALE

It starts as commerce, but the bigger business is the fit data layer that can power multiple sellers, brands, and commerce environments.

WHAT ANTLER UNLOCKS

Founder support, sharper business model validation, fast customer discovery, and the first institutional backing to turn the wedge into a repeatable company.

VISION

Build the fit layer for circular fashion in Africa and beyond, starting with online thrift where the need is most obvious and the data advantage compounds fastest.
